Adaptation

When can we adapt?

PD

$R_T = \text{control signal transfer time between device \& proxy}$

$$s' = f(s)$$

$$B_w \text{ kbps} = B_w \text{ proxy \& device}$$

(2)

χ_R^T = response time with transcoding

$$\chi_R^T = R_T^{PD} + R_T^{PS} + \frac{S}{B_{\omega}^{PS}} + \frac{f(s)}{B_{\omega}^{PD}} + T(f(s))$$

χ_R = response time without transcoding

$$\chi_R^D = R_T^{PD} + R_T^{PS} + \frac{S}{B_{\omega}^{PS}} + \frac{S}{B_{\omega}^{PD}}$$
